How to... Update Apple's system updates easily without using up too much space

A lot of Apple fans have already updated to iOS 8 following the recent release but for those who haven't, these tips will make it easier or keep them handy for next time.

1. Connect your iOS device to iTunes on your computer and backup your iOS device. Then, if something goes wrong, you won't lose any data or photos
2. Upgrade via iTunes – this method is more reliable and you won't have to clear out space on your handset to perform the upgrade
3. New Apple updates aren't always optimized for older devices so it might be worth waiting a few months before you update if you have an older device
